

Want “WOW”?

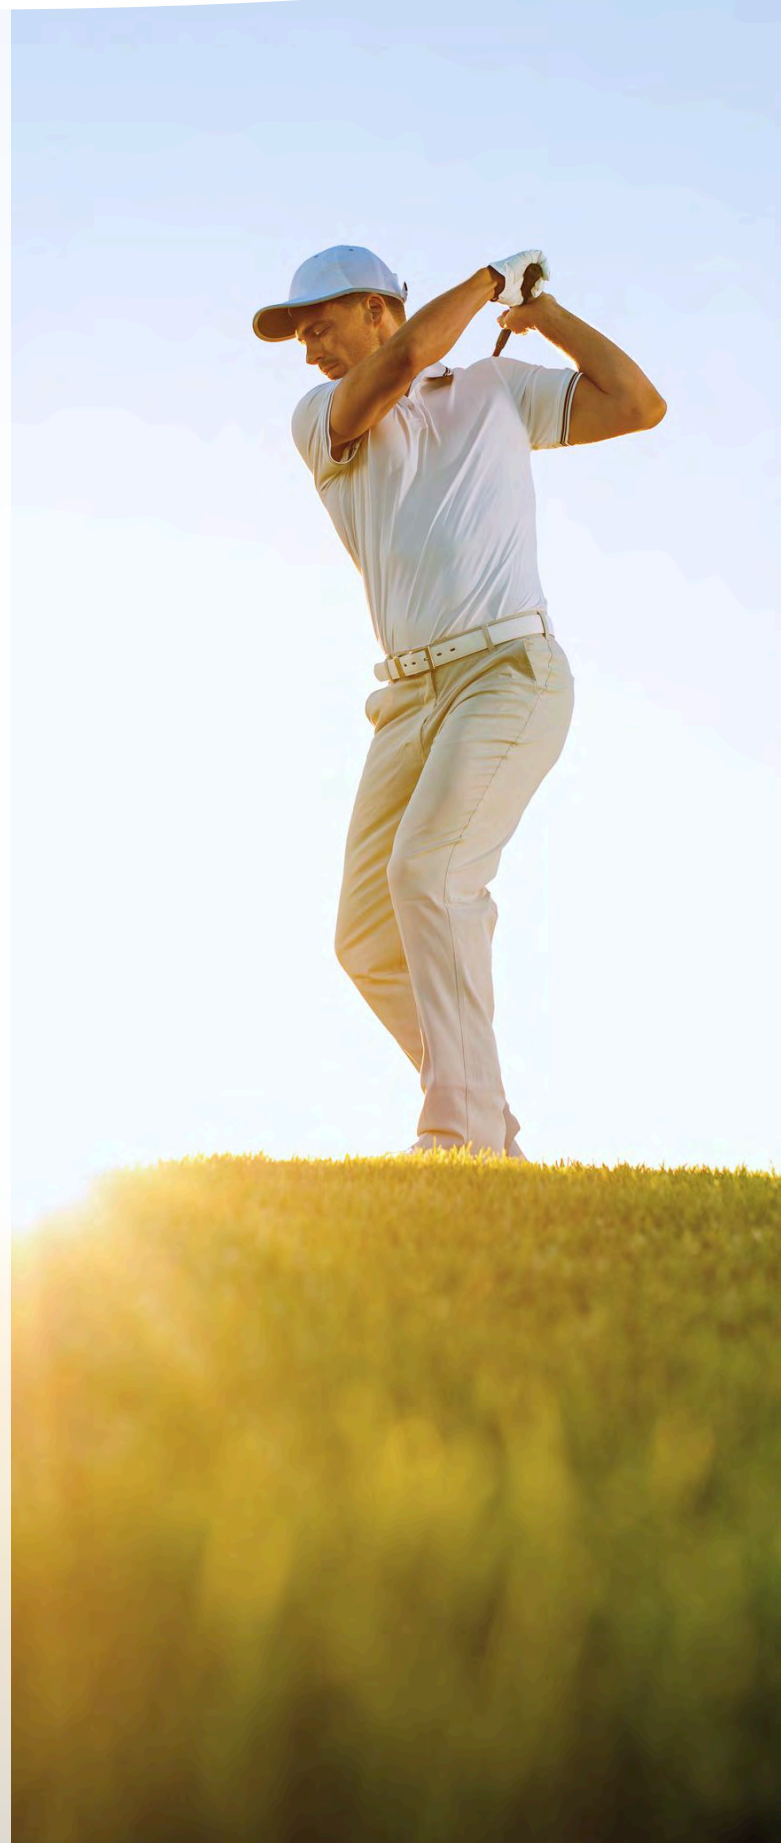

Zeon is in a class by itself.

Simply the most beautiful grass we have ever seen, Zeon masters the complex balancing act between the art of lush beauty and the science of prime performance. Exquisite enough for the highest-end applications, yet resilient enough to take the traffic of cleats and carts, Zeon surpasses the most discriminating expectations and is truly in a class by itself.

An excellent alternative to bermudagrass, Zeon provides a premium playing surface for golf course fairways and tees. However, it grows more slowly than bermudagrass, reducing encroachment, mowing and edging. Zeon also requires far less nitrogen than most bermudas, slashing fertilization expenses by up to 50%. Plus, its bright green color creates a striking contrast with darker roughs and putting greens, which is why Zeon was installed on fairways at the prestigious Atlanta Athletic Club, Greensboro Country Club, Carmel Country Club, and Valhalla Golf Club.

On home lawns, Zeon is truly a barefoot grass with soft-textured blades that produce less thatch than other zoysiagrasses. And it requires incredibly few inputs and can be maintained with a standard rotary mower, making it very homeowner friendly.

When good simply isn't good enough, Zeon zoysiagrass gives you the “wow factor.” In the Carolinas, Virginia, Florida, Georgia and Tennessee, SodStar is the professionals' source for the highest-quality, “Blue Tag” certified Zeon zoysiagrass sod.

Zeon Zoysiagrass

Attributes and Benefits

- ✓ Fine texture and dark-green color = “wow factor” for high-end clients.
- ✓ Low fertility requirement = fewer inputs and cost savings.
- ✓ Excellent shade tolerance = versatile.
- ✓ Exceptional drought tolerance = reduced irrigation needs.
- ✓ Early spring greenup and excellent fall color retention = extended aesthetics.
- ✓ Resistant to insects and diseases = reduced pesticides.
- ✓ Warm-season variety suited for Hardiness Zones 7B, 8A and 8B.

Best Management Practices

Sunlight Requirement: Optimum performance with 4 to 6 hours of sun.

Mowing: Best maintained at 0.250" to 1.0" (reel mower) or 1.0" to 2.0" (rotary mower).

Fertility: Requires less than 2 lbs. N/1,000 ft²/year.

Weed Control: All herbicides labeled for use on zoysiagrass can be safely applied to SodStar's Zeon zoysiagrass. Always follow label instructions.

Disease Control: Zoysiagrass can be susceptible to large patch in spring and fall. Use an appropriate fungicide preventatively on high-end applications, or treat curatively (as needed) on lower-maintenance applications. All fungicides labeled for zoysiagrass can be safely applied to SodStar's Zeon zoysiagrass. Always follow label instructions.

Insect Control: Zoysiagrass is naturally resistant to most insects. Most insecticides labeled for use on zoysiagrass can be safely applied to SodStar's Zeon zoysiagrass
